

ABSTRACT OF THE DISCLOSURE

5 A stroller comprises a main structure provided with a handle including a pair of back pipes, a body structure, and a seat. The body structure includes a back part, and a pair of side parts extending from a right and a left side of the back part, and is formed of a cushioning material. The stroller includes a support sheet for supporting the body structure on the main structure, and a reclining mechanism for adjusting inclination of the body structure relative to the seat. The side parts are connected to corresponding back pipes by connecting flaps formed of a flexible material.
